

## Arcsys Content Management software

Arcsys can gather all archive flows and other paperless office solutions on its unique platform, which is designed to ensure long term preservation with electronic evidence.

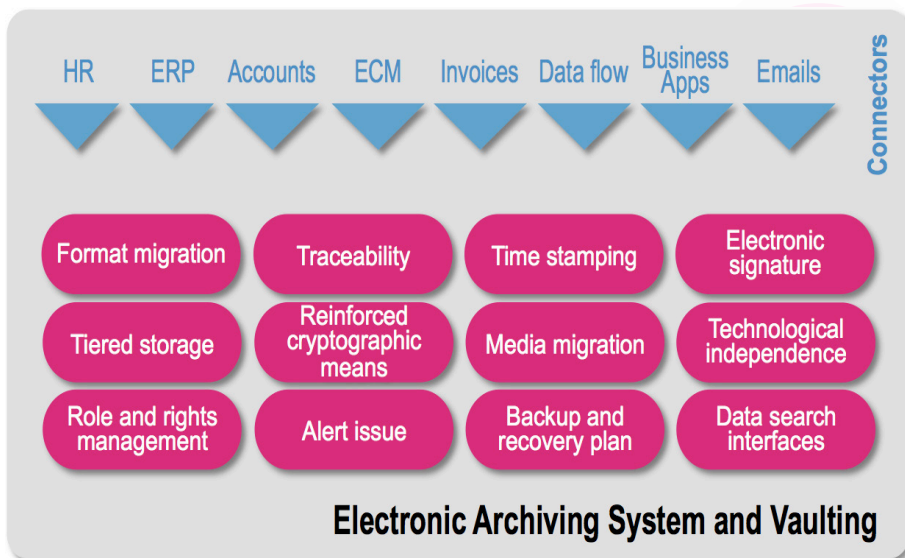

### Features

- Compliance with ISO 14721, Moreq2010 and ISO 15489 standards as well as with legal requirements, regulations and taxation laws
- Data with electronic evidence remains flawless throughout archiving process, from the capture phase to the delivery of final proof
- Sustainable data storage over very long periods of time, despite technological changes
- Simple, user-friendly data search engine
- Strict confidentiality and respect of user rights
- Guaranteed reversibility

### Areas of use

Archiving accounting flows and documents  
 Archiving pay slips and HR files  
 Archiving technical design files  
 Electronic invoicing

Database archiving  
 ERP archiving  
 Document retrieval  
 Physical and electronic archiving

## A centralized platform for all of your company documents

Arcsys can manage all of the company's archives on a single technical platform, whatever the source format or technical characteristics. Connectors, agents, and injectors are used to ensure smooth integration into the IS.

## Complete preservation of Electronic evidence

To guarantee the electronic evidence of the archive, Arcsys applies a specific chain approach to ensure the integrity from the data capture stage on the application platform to the delivery of the final proof document. Arcsys provides archive integrity and accountability over time. Arcsys generates a state-of-the-art proof file to demonstrate compliance.

## Your archives are secure for thirty years

The Arcsys solution offers the following technical features : technology migration, reinforced cryptographic means, readability, integrity and reliable checks, and a guarantee of technological independence. All of these features allow data to be preserved for approximately three decades, and all possible technological hazards during the period are handled automatically.

## Records Management platform

Arcsys complies with Moreq2010 requirements, providing Record Managers with a trustworthy means of classification and preservation of both paper and electronic archives.

## A user-friendly search engine

The Arcsys graphic user interfaces are simple and intuitive and can be customized for each company department, each of which has its own different document search, eDiscovery and follow-up requirements.

## Guaranteed confidentiality

Arcsys enables you to manage archives separately for each data-providing department, and to allocate different rights on each document, depending on the role of each user in the company.

## Flexible integration in the existing information system

Arcsys uses open standard interfaces and is therefore totally independent from any given technology. Arcsys is able to use any type of storage unit available without requiring other proprietary or costly technology.

## A pay-as-you grow solution

Arcsys is designed to take advantage of the infrastructure already in place and adapts its performances to the exiting configuration. Arcsys generates drastic cost reduction in electronic evidence, infrastructure and storage.

## Platform Fully automated

Arcsys provides all necessary verification tools for, the surveillance, supervision and automation of each process involved in capturing and preserving the data archive. The integration of the solution in large companies is thus simplified as no repetitive, time-consuming tasks are required.

Arcsys is an European software editor specialized in enterprise digital assets preservation.
